

Execution layer milestones and relevant devnets

Execution layer EIP revision histories

Primary line: cumulative substantive post-creation revisions. Faint line: all post-creation revisions.
Filled inclusion markers are state transitions; open gray markers preserve same-state records.
Triangles at panel bottoms are relevant devnets; lower opacity denotes medium-confidence participation.
Assessment review lanes from top to bottom: REF, PFI, CFI, SFI, then devnet/testnet markers.
Each event type has a fixed lane; the proposal anchor is the amber dashed rule.
CUTOFF is the fork-level initial-evaluation horizon; its tooltip identifies whether the EIP is forecastable or late scope.
